SURVEY REPORT
South Mountain ADMS Mapping
PCN 630.01.20 Low Org 6961
Survey Control for Photogrammetric Mapping

1.0 Introduction

On February 25, 2013 AZTEC received a request from the Flood Control District of Maricopa County (FCDMC) to provide surveying services for the South Mountain ADMS Mapping project. This photogrammetric mapping project covers 39 square miles of land located in the City of Phoenix. The project is divided into two areas: a 2-foot contour interval area consisting of approximately 25 square miles and a 4-foot contour interval area consisting of approximately 14 square miles. The final Scope of Work was approved by FCDMC on April 12, 2013. Amendment A to the Scope of Work was received on July 5, 2013 extending the project completion date to August 5, 2013.

2.0 Project Survey Datum

The survey work for this project is based on the Maricopa County Geodetic Densification and Cadastral Survey (GDACS) Control Network. Direct satellite measurements were translated to the Project Survey Datum by Leica Geo-Office GPS software using the following parameters:

Coordinate System: NAD 83 (1992 Epoch)
Zone: Arizona Central (0202)
Ellipsoid: WGS 84
Geoid Model: GEOID 99
Units: International Feet
Vertical Datum: NAVD 88

The resulting State Plane grid coordinates were used for this survey. No scaling to ground datum was performed.

3.0 Primary Survey Control

AZTEC recovered and verified 7 GDACS Control Stations within the project limits. To verify the control AZTEC held the superseded NAD 83(1992) published lat/long values and superseded ellipsoidal height for 2BD1 as the basis. The corresponding orthometric height was computed using GEOID 99. **Table 1 – Primary Survey Control** in Appendix A shows the data used for primary control. All data was obtained by RTK GPS procedures using Leica "System 1200" equipment. A minimum of two independent vectors were measured for each control point, to confirm that the published coordinates and elevations for each control point are within GPS tolerances and can be used for the survey. **Table 2 - Primary Control Verification** in Appendix A shows the results of

the control verification survey. All horizontal coordinates and elevations were found to be within acceptable tolerance, and the published data (superseded 1992 lat/long/ellipsoidal height) from the NGS data sheets was held for the survey. All orthometric heights were computed from the superseded ellipsoidal heights using GEIOD 99.

4.0 Aerial Targets

AZTEC received target layout maps and stake-out coordinates from Aero Tech Mapping for the aerial targets. A total of 12 targets were set in the 4-foot contour mapping area and 25 targets were set in the 2-foot contour area. A minimum of two independent vectors were measured for each target, and the average was confirmed to be within 0.1 foot of the independent measurements horizontally and vertically. **Table 3 – Aerial Targets** in Appendix A shows the final coordinates for the aerial targets. Points 1 through 12 are the 4-foot targets and Points 100 through 124 are the 2-foot targets.

5.0 Airborne GPS

The aerial photography was supplemented by airborne GPS for this project. AZTEC provided 4 base stations to control the airborne GPS. Each base station occupied an existing GDACS control point that was previously tied to the control survey. The base station points were located roughly at the 4 corners of the project.

The airborne GPS mission required approximately 8 hours of static GPS data. **Table 4 – Airborne GPS Report** in Appendix A shows the data from the 4 Master Control Stations and the resulting camera centers for the airborne GPS mission. **Table 5 – Control Residual RMS** in Appendix A is a report provided by Aero Tech Mapping showing the RMS values for the aerial targets developed from the airborne GPS data.

6.0 Alpha Engineering Quality Control Checks°

AZTEC used the services of Alpha Engineering (AE) to provide an independent set of ground shots to confirm the accuracy of the DTM. AE conducted a rapid-static GPS survey using Trimble 5800 receivers and each static session had at least 20 minutes of data (OPUS website requires at least 15 minutes for rapid-static). The GPS static files were then uploaded to the National Geodetic Survey - OPUS (Online Positioning User Service) website to be processed and adjusted to national spatial reference system (NSRS) coordinates. These coordinates are Arizona State Plane - Central Zone and orthometric heights determined using GEOID 12A. Two NGS control points (2CG1 and 2BD1) were measured for quality control and to determine if there is a significant difference between static elevation data processed with GEOID 12A against published NGS datasheet elevations determined with GEOID 09. Current published orthometric elevations for NGS points 2CG1 and 2BD1 are determined using GEOID 09 and are 1167.7 and 1182.3 respectively. Orthometric elevations obtained by AE using the OPUS website using GEOID 12A were 1167.73

for 2CG1 and 1182.37 for 2BD1. With less than 0.10 foot variation in elevation between geoid models on known published control points results in a high level of confidence in the vertical measurements for the purpose intended which is independent verification of 2' contour interval and 4' contour interval mapping files.

AE measured a total of 56 random positions and 2 known NGS control points. AE attempted to keep the measurements near the center of section to assure even shot distribution, where applicable.

AE then applied a horizontal and vertical shift to accommodate the need for the data to be on the same datum as previous surveys that were measured horizontally on NAD 83(92) and vertically with GEOID99. AE received the shift data from Aztec on June 3, 2013 and applied the N - 0.13, E + 0.04, Z - 0.17 shift to AE's static survey coordinates. The resulting check for NGS point 2CG1 between AE measurements and the values provided to AE from Aztec are as follows:

NAME	NORTH	EAST	ELEV
2CG1	833830.03	672659.82	1167.58
2CG1(AE)	833830.04	672659.79	1167.56

6.1 AZTEC Quality Control Checks

AZTEC identified 12 major washes within the 2-foot contour area and provided ground shots along the flow line of each wash at approximate 250-foot intervals to provide additional quality control checks.

AZTEC received the final DTM from AeroTech Mapping on 7/26/13. The surveyed values from each survey were compared to the data for the same points obtained from the DTM, and RMS values were computed. **Table 6 –Alpha 4-foot QC Checks** in Appendix A shows the data for the 4-foot CI mapping checks provided by AE. The total RMS for the 4-foot mapping checks is 1.72 foot. **Table 7 – Alpha 2-foot QC Checks** in Appendix A shows the data for the 2-foot CI mapping checks provided by AE. The total RMS for Alpha's 2-foot mapping checks is 0.77 foot. **Table 8 – AZTEC QC Checks** in Appendix A shows the data for the 2-foot CI mapping checks provided by AZTEC. The total RMS for AZTEC's 2-foot mapping checks is 0.62 foot.

7.0 Surveyors Certification

I, Alan D. Reece, a Registered Land Surveyor in the State of Arizona, do hereby certify that the field survey documented herein, along with all field and office processing procedures performed during the survey were performed under my direct supervision during the Months of April through July 2013. The information presented in this Survey Report is correct and accurate to the best of my knowledge and belief.

Alan D. Reece
